# CHOOSING THE BEST SECURITY SOFTWARE FOR YOUR NEEDS

What is security software? Security Software is a program or set of programs that are installed on a computer system to help protect against computer intrusion and unauthorized access to resources on a computer.

There are several different programs that can be used to protect your computer, smartphone and other tech-devices. Some of these include

- Antivirus Software
- Internet Security Software
- Firewall Software
- Virtual Private Network (VPN) software
- Anti-Malware software
- Reliable backup software – to protect your files
- Plus, a heap of other software and tools

reference: https://en.wikipedia.org/wiki/Computer_security_software

When choosing security software, you need to consider what sort of protection you want, how strict you want the protection to be and how much you would like to spend on securing your computer and tech devices. You might only use your computer for light internet access and email but ensuring that your device is secure is vital.

# KNOW THE DANGERS OF NOT PROTECTING YOUR DEVICES

Most people assume that they are protected well enough not to worry about the dangers of cyber criminals. Are you aware of all the ways you can be attacked? Are you familiar with different types of viruses? Here are 4 examples of real life cyber threats that could pose a threat to your devices.

## 1. Hackers
Hackers are attacking computer, smartphones and other internet connected devices every day. These hackers are extremely skilled and do a great job of keeping their activities on your devices hidden.
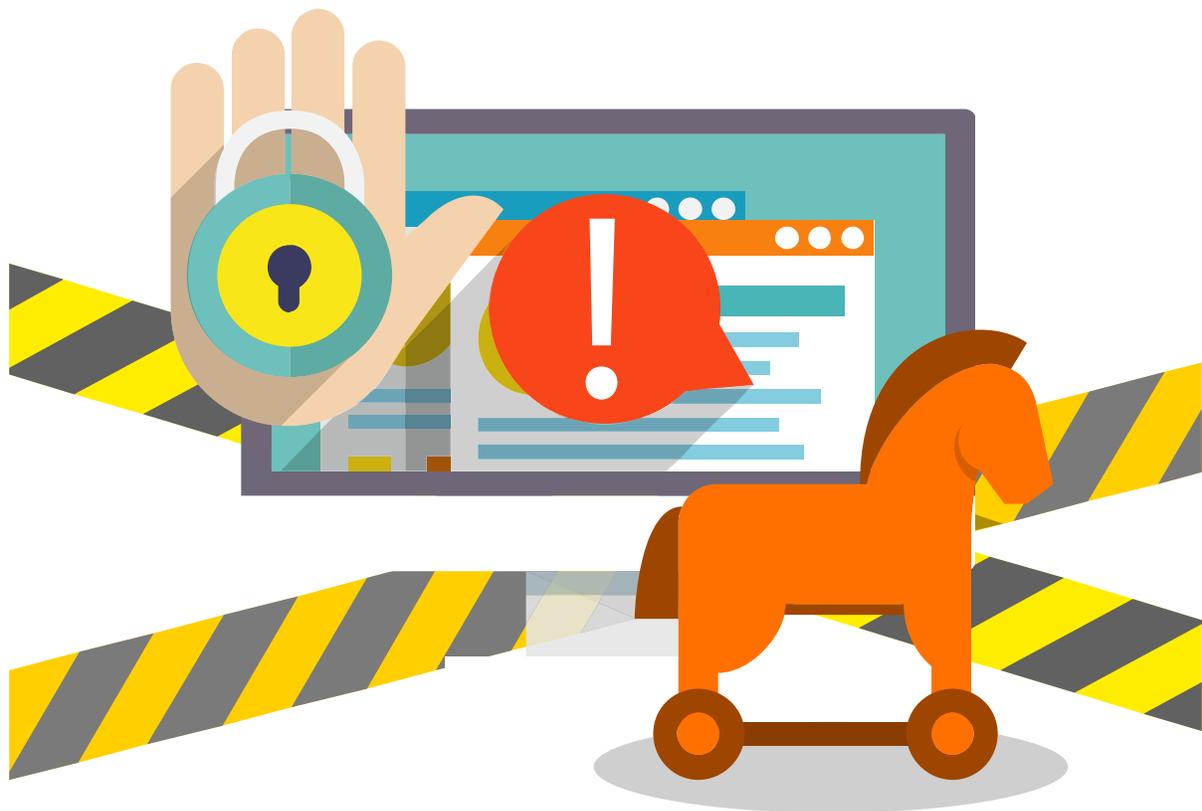

## 2. Unwanted Software
Software that has been downloaded from the internet is not always safe. Some software may seem legitimate but has hidden software attached which can infect your device.

## 3. Ransomware
Ransomware has become more and more serious since 2010. Basically, an unauthorised program on your computer holds all your data at ransom. There is no way to recover from this unless you have a complete backup solution in place.

## 4. Personal Data
One thing a lot of people don't consider is how much personal data they have on their devices. Photos, addresses, Emails. All these things can be stolen without you even knowing. Not to mention banking details. Fortunately, most security software now includes protection for transaction websites.

# WHICH SOLUTION IS RIGHT FOR YOUR SECURITY NEEDS?

## Anti Virus Software

Anti Virus Software is a term that is used quite loosely in terms of security. Many people consider Ant Virus software to be an adequate solution to protecting their computer, smart phone and other tech devices. The issue is that Antivirus software only protects you from traditional viruses. There are dozens of free Antivirus programs available today. Some of these do an adequate job of protecting you when a computer virus strikes but, for the most part these are not going to be enough to keep you protected. See the

| Antivirus Software Pros | Antivirus Software Cons |
|---|---|
| 👍 Suitable for most home users | 👎 Doesn't protect in real time |
| 👍 Protects when a virus has hit your computer | 👎 Doesn't always include firewall |
| 👍 Simple to setup | 👎 Doesn't scan Email |

<div style="text-align:center; background:#5b85c5;">SEE THE COMPLETE BEST OF LIST FOR ANTIVIRUS SOFTWARE HERE</div>

## Internet Security Software

Internet Security software is stronger than a typical Antivirus software. Generally, an Internet Security suite will have an Antivirus component as well as an Email scanner, internet browsing shield and a firewall. Some packages also include the ability to block children from access certain sites.  There are a few reasons that people opt not to go with a full Internet Security suite. The main one being that it can be quite intensive on the computer memory and processor.

| Internet Security Software Pros | Internet Security Software Cons |
|---|---|
| 👍 Full protection against viruses | 👎 Uses a lot of computer resources |
| 👍 Includes Email spam protection | 👎 Can slow computer dramatically |
| 👍 Strong web shield when browsing online | 👎 Doesn't always include ransomware protection |

# Kaspersky Antivirus 2018

Kaspersky Anti-Virus is a simple but powerful software. Like all of Kasperskys software the Anti-Virus offers ransomware protection, simplicity and full technical support.

Kaspersky Anti-Virus is easy to use software that allows you to enjoy your online activities day after day without worrying about malware, spyware viruses and ransomware. If you need to increase your protection you can also upgrade to Kaspersky Total Internet Security anytime.

Kaspersky Anti-Virus includes 5 different protection modules. They are;

1. File Protection – This module scans all files on the system as well as all downloaded files and any program that is run on the system.
2. Web Protection – Protects you while using an internet browser by blocking dangerous pop ups and code from running on your browser
3. System / Malware Protection – This module focuses on protecting you from malware and in particular has the ability to roll back your system to an earlier date if malware hits.
4. IM Protection – Scans instant messages for scams and malicious files being sent. Although IM Software is not as popular as it once was this module still plays an important role for some users.
5. Mail Protection – Simply scans all incoming and outgoing Emails for anything dangerous.
   Note * This does not include a spam filter.
   Consumers are impressed by the simple installation process and the easy license renewal procedure. Kaspersky Anti-Virus 2018 is reasonably priced, effective and well supported.

| Kaspersky Antivirus Pro's | Kaspersky Antivirus Cons |
|---|---|
| 👍 Very easy to use | 👎 Difficult to change some settings |
| 👍 Super-fast scanning | 👎 Auto renew feature hard to stop |
| 👍 Light on CPU usage | 👎 Updates on Windows can affect performance |

# Webroot Internet Security Complete 2018

Consumers are loving the simplistic approach Webroot takes on securing all your devices.  Unlike some competing products the Webroot package includes security for smartphones and tablets. One of the most intriguing features of this software is the 25gb of included cloud storage. Giving you peace of mind that your files are backed up and secure. The cloud storage is a great feature that allows you to easily and quickly put files in to your cloud backup account through the standard windows file manager. Webroot also includes a real-time firewall and network monitoring feature which protects you from unwanted, dangerous programs and website traffic. Webroot is known for quick, accurate scans and features an online banking protection system that will keep you protected in real-time when making online transactions. Like hundreds of other users, you will love the reliability, speed and ease of use that Webroot Internet Security Software offers.

Webroot leverages a cloud-based architecture to keep your system running smoothly without being bogged down by this software. This cloud-based architecture is not a new technology but is becoming more popular across security programs. By having the virus database in the 'cloud' the size of the Webroot software is drastically smaller than that of some of the competing products.

| Webroot Complete Pro's | Webroot Complete Cons |
|---|---|
| 👍 Tiny download size<br><br>👍 Completely cloud based<br><br>👍 Runs fast on almost any computer | 👎 Doesn't include advanced features such as Email scanning<br><br>👎 Can't scan while offline (Because of cloud database)<br><br>👎 Hard to move files stored with Webroot Cloud |

# DECIDING WHAT TO BUY – MAKING THE FINAL DECISION

To help make the best decision in your computer security needs, you should consider first, what it is that you want to protect.

If you are working with sensitive documents and important, personal information you will need to ensure you have a full internet security suite as well as a reliable cloud backup in place.

One thing people often forget is their photos and videos. Yes, music is important too but that can always be found again. Photos, especially family photos can often be overlooked as 'important files' until it is too late. The price of a decent cloud backup solution compared to the value of your photos / videos is un-comparable. You would be crazy not to consider implementing cloud backup into your security setup.
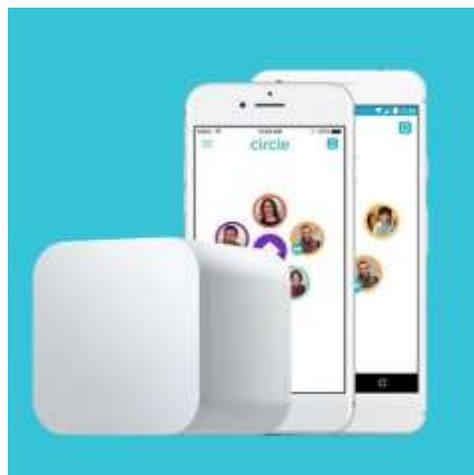

If, however, you are simply using your computer to read Email and write short documents a decent Antivirus will probably suffice for your security needs.

In comparison, If you are downloading a lot of files and email attachments you will need to consider an anti-malware and anti-ransomware software, as downloaded files are the number one source for these types of intrusions.

# BONUS – HOME FIREWALL DEVICES

Personal home security routers and firewall appliances can offer complete control over all your internet connected devices without the need to install complex software. They are particularly popular with consumers who want to monitor and manage what their children are doing online. They can also be used in small business environments to manage employee internet use. They have gained popularity in recent years, mainly for their overall value against the amount of internet connected devices the average home has nowadays.

Most home security firewall devices connect straight in to your existing modem / router. This means that you can keep your whole family safe online and there is no need to reconfigure your existing router, modem or internet connection. Most of these devices also include apps so you can easily monitor internet activity, and even PAUSE THE INTERNET in your home.
